

International Journal of Developmental Science

Biopsychosocial Mechanisms of Change, Human Development, and Psychopathology - Perspectives from Psychology, Neuroscience, and Genetics

Call for Papers Submit Your Article

Submit manuscripts electronically via the msTracker [online submission system](#).

For detailed instructions to authors please visit our [website](#).

The editors of the *International Journal of Developmental Science* (IJDS) are inviting authors to submit papers for publication. The journal's aim is to present state-of-the-art research in the realm of developmental science conducted in multiple disciplines worldwide. Cross-cultural, as well as comparative developmental studies will also be represented. The IJDS intends to provide a platform for diverse forms of studies dealing with biopsychosocial mechanisms of change, human development and psychopathology.

The IJDS invites English-language manuscripts. All manuscripts pass through a multilevel peer-review process. Authors are invited to submit original empirical or theoretical contributions (e.g. analysis of, or commentary on, established theories in the field of developmental science, novel theoretical developments, or attempts to elaborate and integrate existing work), methodological and review papers (e.g. systematic reviews, meta-analysis or extensive review papers, as well as papers dealing with any methodological issues of particular relevance to developmental science) giving a systematic overview or evaluation of research and theories of developmental science and dealing with typical human development and developmental psychopathology during infancy, childhood, adolescence and adulthood. Manuscripts on animal research with results that are relevant to the understanding of human development are also considered. Manuscripts on social, health and education policy are welcome if they are based on theoretical and empirical principles concerning developmental science. Manuscripts devoted to interdisciplinary topics of phylogenetic or ontogenetic human development are of particular interest (e.g. psychology, philosophy, sociology, anthropology, neuroscience, genetics and biology).

Full-length articles are welcome, but authors are also encouraged to submit brief empirical research reports. Thematic issues or thematic sections about a specific topic will be edited by an invited expert/expert team. Proposals for thematic issues or sections should be sent to the Editor-in-Chief and will be reviewed by the Editorial Board and by external reviewers.

The IJDS is available online and in print. The complete [inaugural issue](#) and several other articles are freely available online. [Sign up for automatic eTOC alerts](#) as new issues are published.

Suitable manuscripts are usually published within 3 to 4 months from submission. Submissions are welcome at any time.

All manuscripts, including tables, figures, etc., should be submitted electronically to our [online submission system](#). Accepted articles will be placed online as "pre-press" articles shortly after acceptance. For detailed instructions to authors please visit our [website](#).

We look forward to your contributions and hope you will consider the IJDS for your future research!

The Editors

Herbert Scheithauer (Editor-in-Chief), Angela Ittel and Peter C.M. Molenaar (Co-Editors).
